

Speaker 1

They are called bulldozers, the machines. They are cutting down trees. You can see – the trees there.

You can see a truck transporting wood from the way they cut the trees down. Then you can see they have made wood, like they've made timber out of the wood.

And the solution is to plant. We can even see here, there is a homestead and the mum is cooking using firewood which is gotten from cutting down trees.

And now this is my solution here.

Planting as many trees as possible.

OK country, this is that farming.

Sorry this is our home.

This is our house or like our home, but they have also managed to get natural hedges like yes it's a compound but we have planted small small trees which is also good.
